

The proposal of the management organization  
in the earth and the human society

# The plan to the overall problem by the small scale center government

The activity of the human being became the earth level.  
However, in the situation which is doing an activity under the free  
competition, the whole balance becomes unstable.  
It is necessary that we think about the normal human society in the future.

The human can not manage all in one group.  
But we need the whole management.  
The government exists for the people to live happily.

# Reason

The activity of the human being became earth level. This planet is the water tank that the creature lives. **The wave** occurs when we work. But, it makes big **intentionally too much**. At present, it becomes any storms and impure.

In the present free competition society, the whole can not be managed. In the activity of the present state unit, it isn't possible to regulate and the balance must be taken as a whole. We must act **to the good way** in the society.

The small-scale central government is necessary **to solve the whole problem**. The government exists for the earth environment and the people.

The happiness of the people is in **the beauty**(not in the chicanery), **need** and **the mutual understanding**(not peeper).

# Center Government overview

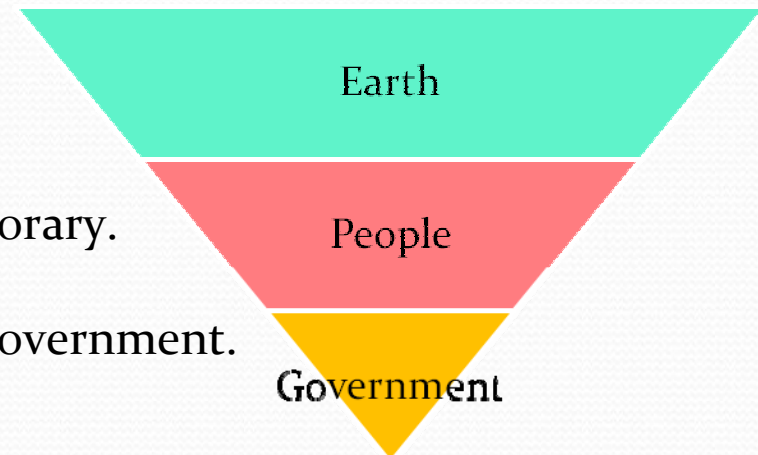

The small scale center government works to solve the common problem .

Every nation governments is each area governments. The central government gathers each area governments and so on and does the conference. And it fixes the measure activity of the common problem. It works mainly to achieve the following.

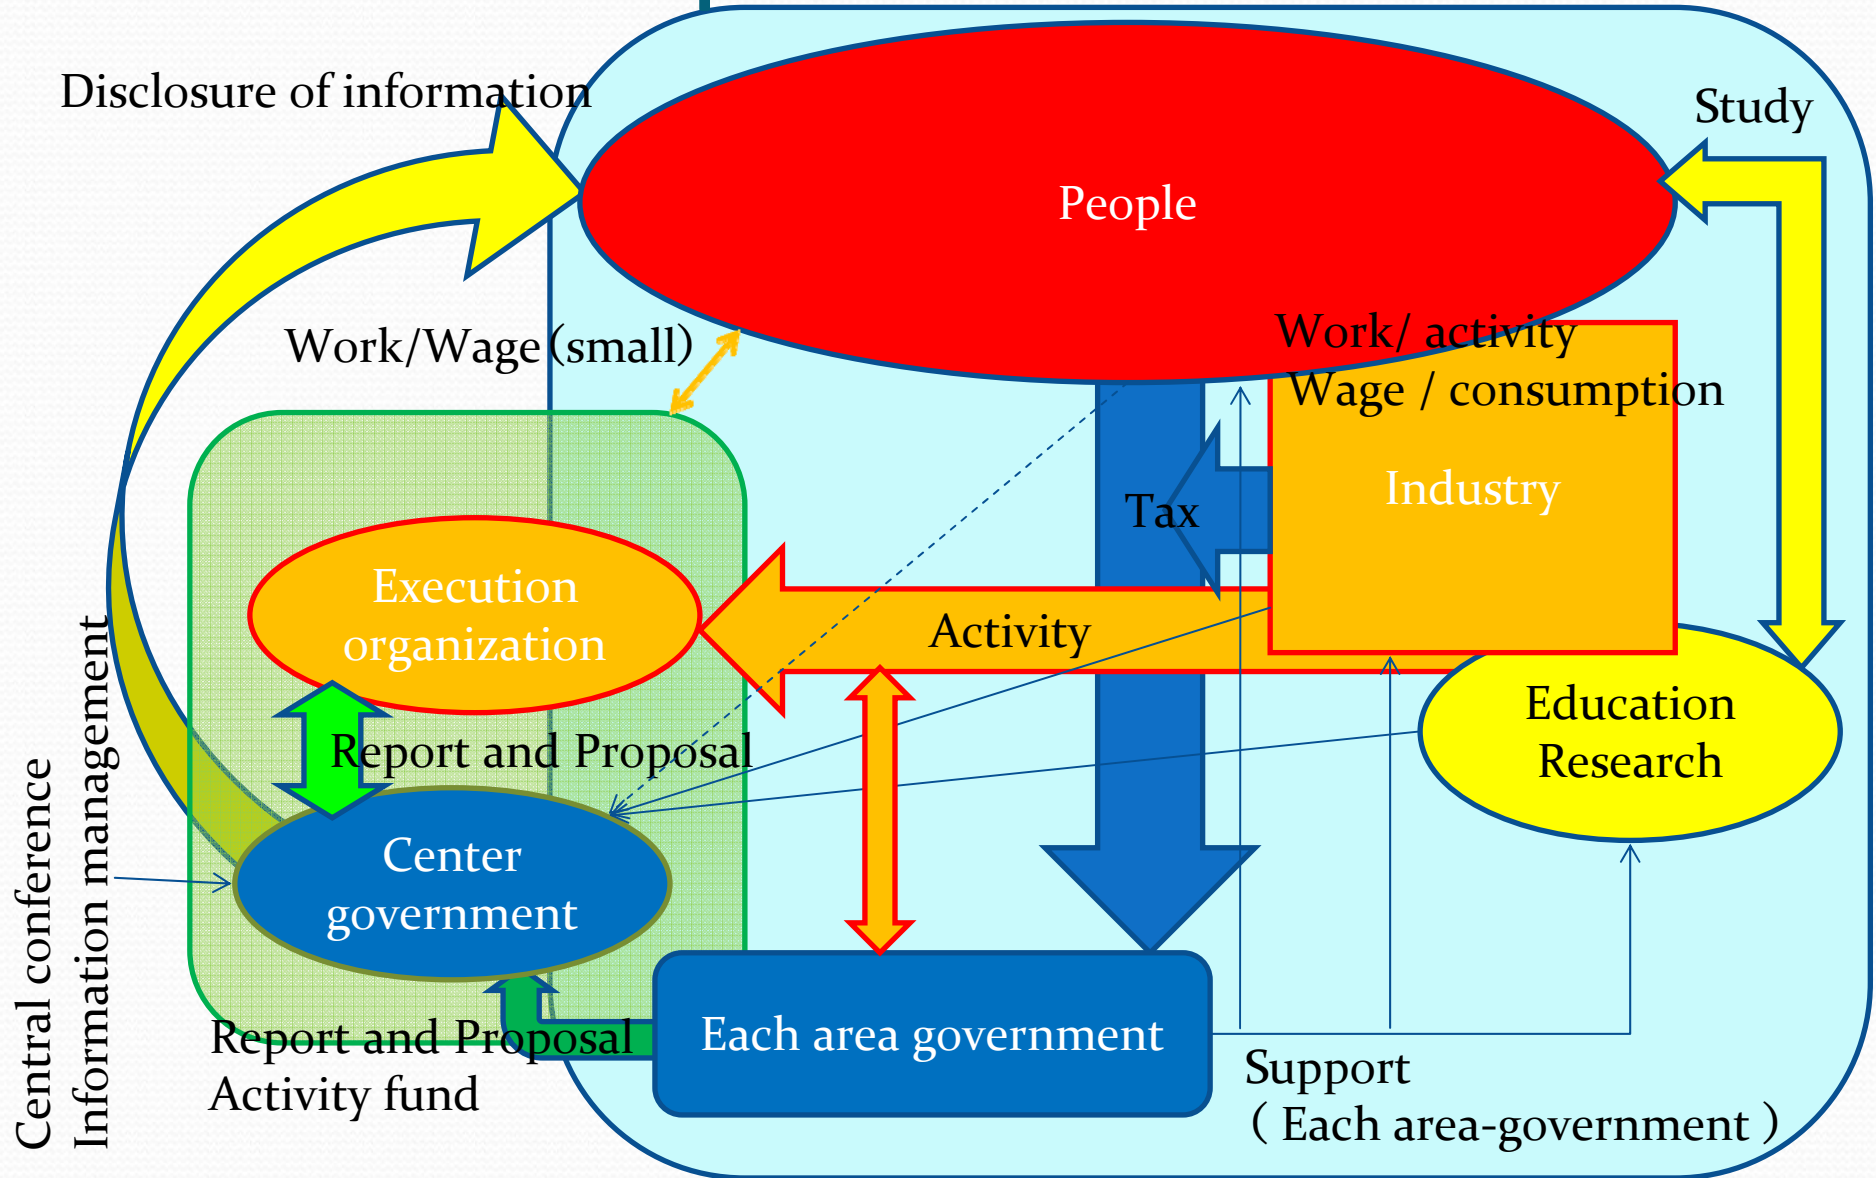

- The activity for the earth environment improvement.
- The investigation of the malfunction of the economic system.
- The problem solving when the area government doesn't become for the people.

Note : The group name of this document is temporary.

It entrusts each area administration to the area government.

# Whole composition

# Policy: Center Government

The organization for the overall problems.

There is not need of the fixation in the location place in the headquarters.

The activity organization does an actual activity.

As for the staff in the Center government, the person who did the actual work which is not an administrator in the private company for equal to or more than 5 years does.

(It contains individual business, too.)

The wage isn't high. In the labor period and and the wage of the staff, it considers and it manages a long period. It must be told to each staff.

This organization is investment prohibition.

It is possible to contribute but there is not reward.(It possible to exhibit.)

This organization can have a fund deliberately but must exhibit it.

For the activity organization to cause industry, it is possible to invest from the bank.

However, the area government should do it as much as possible.

The state of the activity organization and the area government is exhibited from this organization.

# Policy : Area Government

All present nation governments are the area government.

All area governments must connect with the central government.

It doesn't need competition among the area governments.

(This is the species of **the war.**)

The autonomy in the area is in the area government.

(**The variety** is necessary.)

The Area government exists **for the people and an Erath.**

It is possible to integrate among the area governments when each agrees.

When the condition of the present area government doesn't become for the people, it is possible to split.

Each area can limit the traffic of the person among the areas.

The customs duties are possible because it doesn't lose the industrial bud.

(But, the extreme customs duties lose competition power.)

The ability use by the army in each area is prohibition.

The area government can only defend.

By the conference of the central government, the area government reports the present activity situation.

# The progress of the central conference

## **1. Each plan create**

(It plans to do a schedule, to do a cost and to do personnel and so on, considering a temporal wave.)

It uses people in the activity area as much as possible.

(If the activity with the long-range profit, it makes industry.)

## **2. The overall activity plan**

The whole activity plan is examined from each distribution and the beginning time.

## **3. It discusses with the area government and so on and it fixes the whole rate.**

## **4. The regular adjustment of all the plans**

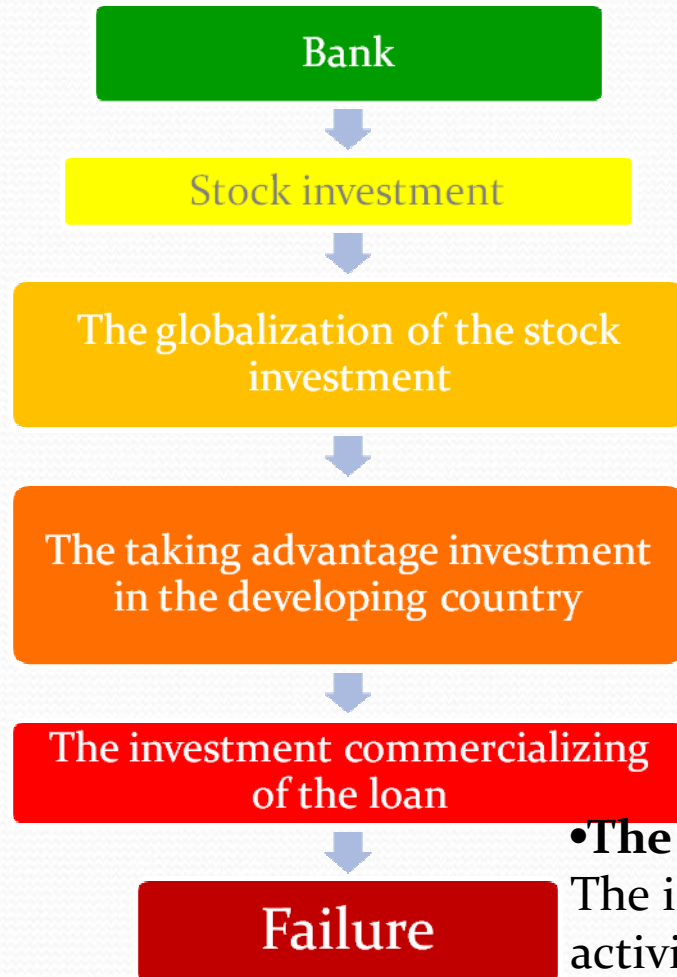

It returns first.

## **The special adjustment**

When the big fund is need and so on, it examines once again from the overall plan.

# Execution organization:

The financial depression process

## Economic problem(1)

- It connects with the success of the smaller business.
- The big businesses pay the investor a profit. It becomes the pressure which makes big businesses bigger.
- The developing country does sudden activation. The competition of the low price goods becomes big. The laborer becomes a low wage. The consumption flounders. The investor **doesn't think of the necessity**.
- It is made a numerical formula and it gets not to understand the details of the risk. The consumption rises.
- The investment became big** for the industry too much. The industry can not make the laborer do a consumption activity.

We **don't need a lot of big wave**. The industry **doesn't exist for the gamble**.

We must do little by little to the **normal** condition.

Example: Micro Credit (Grameen Bank)

# Execution organization:

## Economic problem(2)

The economy isn't activated if there is not a consumer.

The multitude of the consumer is a laborer.

If the laborer can not live, the economy doesn't stand up.

We need laborer and a consumption balance.

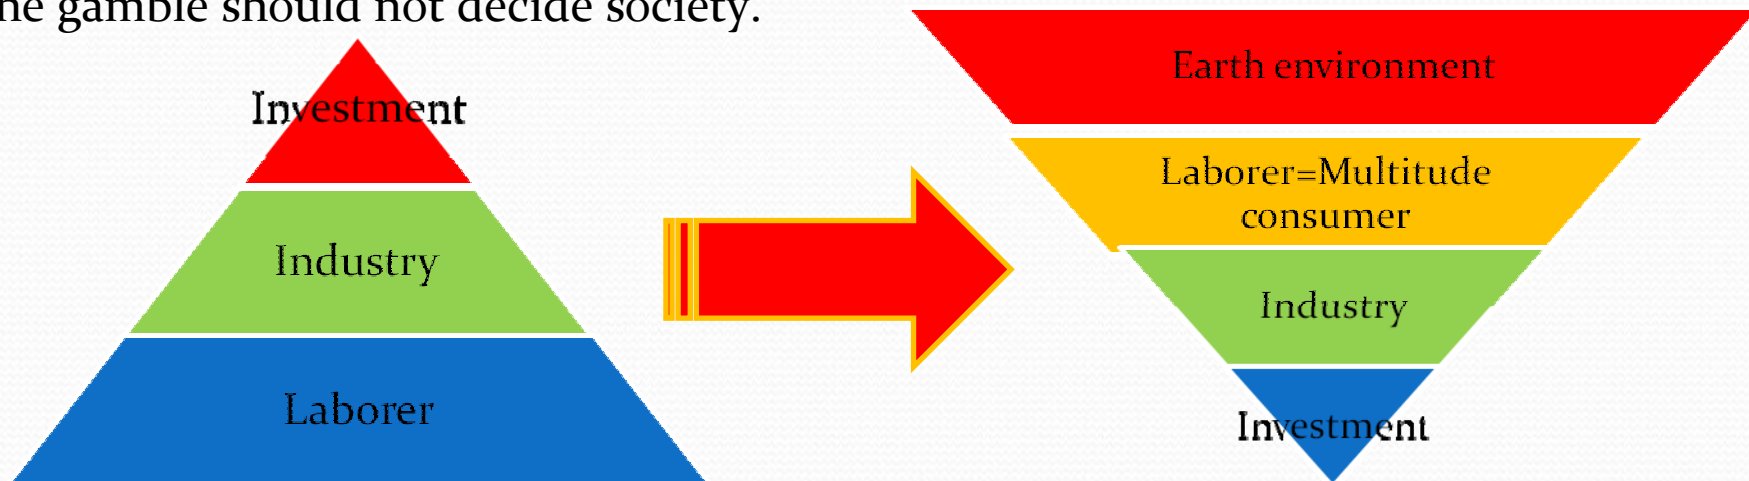

Generally, the corporation who has a big profit **doesn't need investment**.

The purpose of the following needs investment.

- The fund to begin work,
- The activation of the fund lack corporation

As for the area with low labor wage, the whole environment must be considered.

The gamble should not decide society.

# Execution organization:

## History recognition of all the human

The purpose:

In the times where there is friction among the nations, it ends.

All events are the result which was done in the range of the environment, the ability and the knowledge. We don't need to become a quarrel from the history. We don't want to quarrel. It is wasteful time. We should use time effectively.

There is not a form like the good and bad.

(There is not a bad thing from the beginning.)

It makes the style which all the human races can recognize in common.

As for the war, it writes a situation from the time background, the environment, the thought and the past.

When there is more than one opinion, it makes either of the following.

- It mentions all opinions.
- It doesn't mention all opinions.

When becoming a quarrel, it Pause or Stop.

# The execution organization

## **The earth environment**

It does the investigation and the improvement activity of the global warming and the environmental pollution.

We must do the examination to return lifted carbon to the ground.

We made carbon gas too much. The carbon not to use that the microorganism can eat must be returned to soil without burning it.

If the species of the weed is troublesome as the manure, then we should do a research about the activated stop of the species.

The nature protection is more important than the development of the people.

## **The food and the population**

It makes manage a balance with the population to have considered economy and foods by the area unit.

The water supply plan to the dry area.

The comestible fish livestock making plan.(It makes to eat a natural fish little.)

Oil money should use for the build basis of the agriculture, forest and so on.

(When not thinking of the future, it doesn't become happy.)

## **The medical treatment**

It follows the policy of WHO.

# The execution organization

## **The local administration investigation**

The area government has an autonomy in the area. However, in the following case, the central government intervenes.

- When there are interference and a racketeer among the Area Governments.
- When not becoming for the people
- When the area government doesn't work
- When promoting the destruction of the earth environment
- When expanding military affairs
- When making a destruction activity organization big

Generally, it makes a solved policy from the request of the area government of the problem.

The activity makes the plan and it must be ended in the short time.

A purpose is not to make the enemy and there is it to make be independent.

(The actual activity that Each area governments cooperates respectively.)

The terrorism problem should examine a solution from the occurrence cause.

Example:

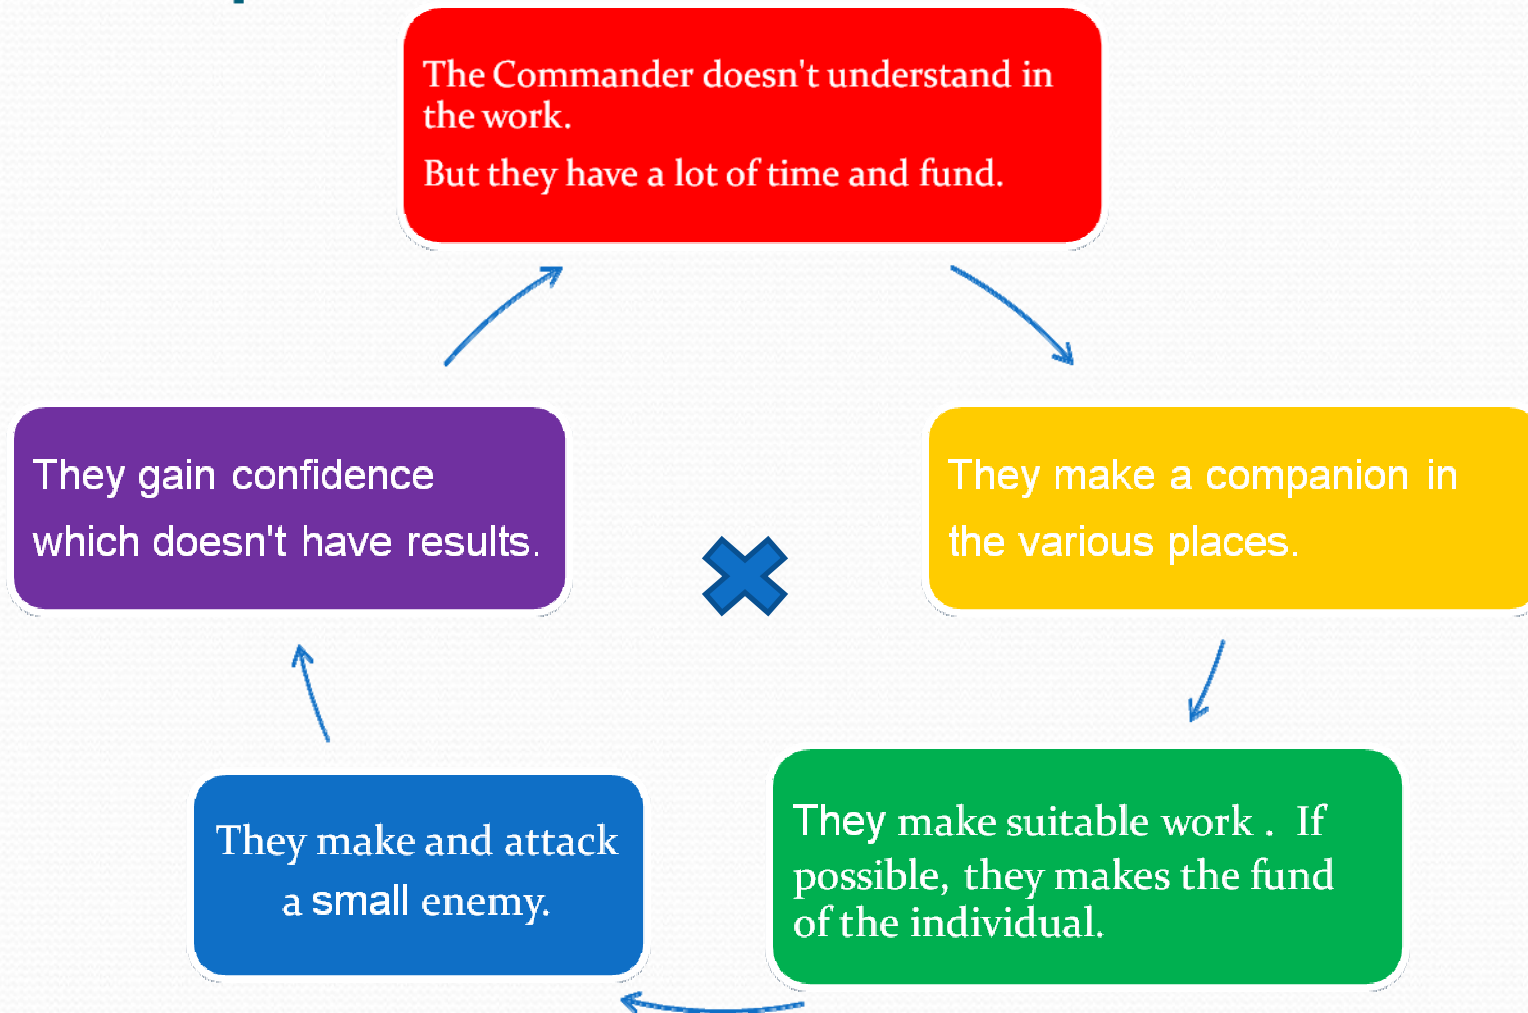

Israel: The government should know a reason for the foundation and the relation with the neighborhood. If the government doesn't work for Palestinian. It makes a neighboring country manage a Palestinian area.

Afghanistan: The terrorist grew up from the cold war. In the problem solving, it should know a request on the side of the terrorist. This area needs industry and water.

North Korea: If not working for the people. It should unify north and south.

# Reference:

## Corruption of the organization

Note: There is possibility to occur in case of management.

# Reference: Failure of the business

The failure contents are important.

Because, the failure becomes the nutrition of the problem solving.

Proposition of  
the work

The investigation isn't  
enough and the work  
doesn't become clear.

The plan  
becomes  
ambiguous.

It gets not to find  
that the plan  
progresses.

It looks for the problem from the progress situation and it revamps a plan once again.  
It works to pause until a measure plan is made.

Proposition of the  
work

A lot of fault points of  
the work come out.

It isn't possible to  
present the plan of the  
work.

It should be from the experimental activity.

Note: There is possibility to occur in case of management.

# Reference: The other

Which following environment does it like?

- The human race controls all of the earth.
- The human race doesn't break nature.

I hope that the **variety** is necessary.  
The nature in the earth is **beautiful**.

We should think including the other viewpoint in addition to the present plan.
